

THE OVERLOOKED PART OF THE CLIMATE SOLUTION.

THE FOREST, FOOD AND LAND CHALLENGE TEAM

We're calling on businesses, states, city and local governments, and global citizens to take action for better forest and habitat conservation, food production and consumption, and land use, working together across all sectors of the economy to deliver up to 30% of the climate solutions needed by 2030.

Farmers and ranchers, businesses, states, cities and local governments, indigenous leaders, scientists, financial institutions, artists, religious groups, NGOs and global citizens all have a critical role to play in reducing forest, food and land-based emissions to help tackle climate change.

Ahead of September's [Global Climate Action Summit](#) the land sector is coming together to define and commit to deliver on this challenge. At the Summit we will share and celebrate what has been achieved to date and create more ambitious worldwide commitments and coalitions to accelerate action and help national governments deliver on their climate goals.

We need to unite a sector. We need to define the science. We need to drive investment. We need to deliver ambitious and innovative solutions. We need everyone's help.

Manuel Pulgar-Vidal—Leader of the Climate and Energy Practice at WWF International and former President of COP 20—is on the [Advisory Committee](#) of the Global Climate Action Summit and leading the convening of the food, forest, and land challenge coalition. We invite all stakeholders to join us by mailing land@climatelandchallenge.org.

-

Our actions will reduce greenhouse gas emissions from land use directly and encourage national governments to accelerate their progress. We have no time nor land to lose.
